

## Instructions

Review the scenario below and complete the tasks as outlined. Once the task is completed, present your screen to the Trainer and you will receive the next scenario.

## Scenario

You work in a medical office and notice that one of your colleagues has a custom view that you would like too. Follow the “How to Personalize Your View” document to create the view below.

The screenshot displays the ClinicalViewer interface with four main panels:

- Medications:** A table with columns: Dispensed Date, Generic Name, Brand Name, Strength. It lists various medications like ERYTHROMYCIN, ACETYLSALICYLIC ACID, etc.
- Visits/Encounters and Summary Reports:** A table with columns: Date, Type, Summary Rep..., Organization. It lists patient visits such as ED, Ambulatory, and Inpatient.
- Documents/Notes:** A table with columns: Document Date/Time, Document, Description. It lists documents like Physician Consult, Triage Note, etc.
- Diagnostic Imaging:** A table with columns: Procedure, Date/Time, Report, Image, Procedure Description. It shows "No results available for the selected time interval."

Task	Answer / Initials
1. Create a custom view	
2. Select your patient to display your custom view with patient details
